′Up to 200 MS/s

High-speed

Sampling

# Highest Sampling Speed in the Entire Series

High-speed isolation measurement at 200 MS/s
 Up to 16 analog channels & 12-bit ADC resolution

The Hioki Memory HiCorder lineup now includes a powerful input unit that unlocks the full measuring potential of the MR6000.

The High Speed Analog Unit U8976 boasts the highest sampling rate in its entire series, an order of magnitude faster than conventional models, enabling the unit to perform isolated measurement at 200 MS/s.

(200 MS/s measurements can be achieved even if a unit other than the U8976 is connected at the same time. However, the data update rate will not exceed the maximum sampling rate of the other units.)

#### Blazingly fast, Sampling that never fails

The High Speed Analog Unit U8976 delivers a 30 MHz frequency band in addition to high-speed sampling at 200 MS/s. It has the performance needed to accurately capture switching waveforms during inverter evaluation testing, an application where high efficiency is critical. Adapted to the Memory HiCorder's direct input feature, it can accept inputs of up to 400 V DC.

#### Used in combination with the 10:1 Probe 9665

If you encounter issues with the capacitance components of connection cords, use the 10:1 Probe 9665 to reduce the effects on measured waveforms.

\*For more information about frequency deratings, either consult the user manual that comes with the 9665 or contact Hioki.

#### Safer due to channel-to-channel optical isolation

Connections between analog input channels, and between the input channel and the main unit, are fully isolated. This means that, unlike an oscilloscope, measurements can be made without concern with negative effects from voltage

differences. This is because connections between analog input channels, and between the input channel and the main unit, are fully isolated.

# Fastest Save Processing in the Entire Series

· Radically improved data saving time

### · Stress-free user experience

Transferring very large amounts of data measured over a long period of time used to be very time-consuming. The MR6000 features a brand new interface and faster internal processing, reducing the time required to save measurement data to media. For example, a save operation that took 1 minute on the previous model now completes in 2 seconds. This saves you the trouble of waiting for data to be saved and improves work efficiency.

# Longest Continuous Recording in the Entire Series

· Long-term recording and high-speed sampling in multiple channels

#### · Instant analysis of measurement results

You can control the available measurement time by using the real-time save function and an additional storage media.

For long-term recording, we recommend ordering the MR6000 with a built-in high-capacity SSD or HD unit. You can also use a more convenient USB memory stick or SD memory card. All phenomena can be recorded at a high sampling rate over a long period of time.

#### Saving data directly to your PC

Transfer measurement data directly to your PC by using the FTP sending function or network drive function together with the real-time save function. This makes it easier to observe data after the measuring process.

Available real-time save duration when setting 1 MS/s

Save destination	าร	Sampling rate	Number of channels	Available measurement duration	Maximum sampling rate for real-time save*1

# An Extensive Line of Units for Detecting a Wide Range of Phenomena

Combine multiple units to record a range of phenomena. Use multiple logic units to measure relay ON/OFF signals or PLC (programmable logic controller) signals across up to 128 channels simultaneously. You can also measure temperature by attaching a thermocouple to a temperature unit.

# Simultaneously measure up to 32 channels

#### 4ch Analog Unit U8975

The U8975 accepts direct input of up to 200 V DC across 4 channels. With a sampling rate of 5 MHz (across a frequency band of 2 MHz), high speed, and 16-bit resolution, it can perform multi-channel, high-speed, and high-resolution measurement.

Simultaneous measurement of multiple locations across 32 channels at 5 MS/s

# Record frequency fluctuation and pulse count/integration data

#### Frequency Unit 8970

Use the Frequency Unit 8970 to record measured waveform frequency, RPM, input pulse integration, duty ratio, and pulse width variations. It can accommodate numerous applications, including measurement of motor RPM, vehicle speed, and power supply frequency fluctuations. Thanks to a maximum input voltage of 400 V DC, it can also directly measure 3-phase circuit carrying up to 200 V.

# Direct, high-voltage input without differential probes

#### High Voltage Unit U8974

The U8974 is ideal for measuring the primary and secondary sides of UPS power supplies and commercial power supply transformers. It can measure high-voltage power lines, including 380 V and 480 V circuits found in many countries. With high-speed sampling at up to 1 MS/s and 16-bit resolution, it can also be used in load rejection testing and switch testing.

Analyze correlations between phenomena, including voltage levels before and after generator disconnection, RPM fluctuation rates, governor servo operating status, and voltage governor switching timing.

# Specifically designed for DC voltage measurement with extremely high precision and resolution

#### Digital Voltmeter Unit MR8990

The MR8990 can measure minuscule fluctuations in sensor output of automobiles and voltage fluctuations in batteries, both at high precision and resolution. It can accommodate maximum input of 500 V DC. This high input impedance allows you to measure the battery voltage without being concerned about leakage current. Additionally, the amount of space taken up by instruments can be reduced by replacing a bench-style DMM with the MR6000. Systems can be simplified by eliminating the need to control multiple instruments.

Battery

Battery pack

# Simultaneously measure up to 32 channels at high resolution

### 4ch Analog Unit U8978

Thanks to four input channels and a high-sensitivity 100 mV f.s. range, the U8978 can measure multiple channels of output from a variety of sensors. The unit is ideal for use in measuring currents of various magnitudes in the development of automobile accessory controls. Utilized in combination with the multi-range Current Probe CT6711, it can measure currents from 1 mA to 50 A.

# Observe minuscule currents using high-sensitivity wideband current probes

#### Current probe lineup

Analyze minuscule current waveforms from low-powerconsumption devices in 100 µA resolution. Record device current consumption waveforms in high resolution over extended periods of time.

Current consumption waveform for a temperature and humidity sensor

# High-speed sampling lets you accurately measure inrush current

#### High-Speed Analog Unit U8976

Combine the High-Speed Analog Unit U8976's 30 MHz frequency band with the Current Probe CT6711 to measure inrush currents and minuscule currents.

#### Power can be supplied from the MR6000.

Power can be supplied to current probes by using the Power Probe Unit Z5021.

Hioki offers a wide range of current probes to suit all frequency band and rated current needs.

### Single solution for 3-phase current measurement 3ch Current Unit U8977

The U8977 delivers a sampling rate of 5 MS/s, frequency characteristics of 2 MHz, 16-bit A/D resolution, and DC accuracy of 0.3% f.s. to facilitate wideband, high-precision current measurement using Hioki current sensors.

#### Automatic configuration of sensor scaling values

When you connect a current sensor, the MR6000 will automatically detect the model and set the appropriate scaling value.

Connect sensors directly

# Power is supplied from the current unit

Since current sensor power is supplied directly from the current unit, there's no need to provide a sensor power supply.

# Compatible with high-precision sensors for measuring large currents

#### Current sensor lineup

Clamp-type high-accuracy sensors deliver excellent temperature characteristics, allowing highly accurate measurements to be made even in the confined space of a vehicle's engine compartment.

Sensitivity variations of high-accuracy clamp-type sensors caused by temperature

#### Zero-point stability

Wideband flux gate technology delivers high zero-point stability over extended periods of time.

Hioki offers a wide range of current sensors to suit all frequency band and rated current needs.

# CAN/CAN FD Measurement, LIN Measurement

CAN buses carry not only control information, but also sensor information required by the ECU for control purposes. Analog values for sensor input signal quantities such as voltage, strain, temperature, flow rate, RPM, torque, vehicle speed, and vibration can be measured at the same time as these signals.

### Capture all data on the CAN and LIN bus during measurement

The MR6000 captures all frame data on the CAN or CAN FD bus and LIN bus during the set recording time. After measurement, you can specify the signals you wish to check and display them on the screen.

Choose signals to display after measuring all bus signals

#### Principal CAN or LIN signal measurement specifications

\* CAN bus and LIN bus cannot be measured at the same time.

Compatible instruments	Memory HiCorder MR6000/MR6000-01
Compatible interfaces	Vector VN1600 interface family
Number of interfaces that can be connected	Up to 1
Standards	CAN, CAN FD, LIN*
Number of CAN or LIN channels that can be measured	Up to 4*
Number of CAN or LIN signals that can be measured	All frame data on CAN bus or LIN bus
Number of CAN or LIN signals that can be displayed at once	While measuring: 64 preset signals After measuring: 16 signals can be selected and displayed from all recorded data

Vector" refers to the Vector Group, whose parent company is Vector Informatik GmbH \*Hioki is unable to provide Vector products. Please purchase those products separately.

### Load to waveform viewers compatibled with MDF format

Vector VN1600 interface family

Simple USB connection Measure CAN signals without using a special unit. Using a Vector VN1600 interface family product, you can measure CAN signals simply by connecting it to the MR6000's USB port.

Analog, logic, CAN, and LIN data measured using the MR6000 are saved in MDF (Measurement Data Format) and can be loaded by any waveform viewer that supports MDF.

# **CAN** trigger function

#### For CAN

You can use a CAN signal (frame) as a trigger source. The trigger will be activated when the set CAN signal type and ID is input.

#### Data frames

#### **Remote frames**

Set the ID, expressed by a hexadecimal value, as a trigger source.

#### Error frames

Error frames can also be set as a trigger source.

# Transmit function

For CAN

You can send data configured before measurement to the CAN bus at the start of measurement or when a trigger is activated.

A shortcut key can be assigned to the transmit function

### Hioki offers CAN signal acquisition sensors

Non-Contact CAN Sensor SP7001/SP7002

No modification of vehicle cables Acquire signals simply by pinching the cables with the probe.

No effect on the CAN bus or vehicle ECUs

Non-contact sensing technology

Accurate, reliable signal capture Ideal for use in development and evaluation applications

# Real-time Waveform Processing Function

#### Real-time waveform processing

Exclusive MR6000-01 feature

#### Calculate measurement data during measurement

The MR6000-01 further features powerful technology designed for robust real-time waveform processing. This function performs arithmetic (addition, subtraction, multiplication, and division), differentiation calculations, or integration calculations during the measuring process, letting you check the calculated results via waveforms while measuring or monitor starting from set triggers. Results can be further processed after measurement and saved.

	111

# Long-term Recording Functionality

In addition to the real-time save function, the MR6000 provides a range of functionality for extended recording.

### Envelope function Observe fluctuations over the long term

with high-speed sampling

The system uses the envelope measurement method to record maximum and minimum values at set intervals while performing oversampling at 100 MS/s. The internal memory has a capacity of 1 G-words, which ensures that the measuring process can continue for a long time without any data loss. Save data in real time while measuring.

MR8990 is in use, and when performing real-time waveform processing

# Dual sampling function

#### Measure anomalies during extended testing with high-speed sampling

In vibration testing, it's necessary to record comprehensive test data for several hours. At the same time, it's necessary to capture areas of the waveform where anomalies occur with high-speed sampling for analysis once measurement is complete. The dual sampling function is useful in such situations.

#### (1) Record the entire trend waveform

Use the envelope function to record comprehensive test data for several hours.

#### (2) Check details with the instantaneous waveform

Anomalies occurring during the test will be captured with high-speed sampling based on triggers that have been set up in advance. By tapping on a trigger mark's number, you can display the instantaneous waveform for the anomaly that occurred at that waveform area.

100

Tap to enlarge the anomaly waveform

## Verify that no anomalies occurred during extended testing

#### No trigger marks

If no instantaneous waveform triggers activated, there were no anomalies. By viewing the trend waveform, you can not only verify that no anomalies occurred, but also check whether the device under test operated properly.

# Trigger Function

# Triggers that detect targeted events

Set triggers on any channel to record data whenever an event occurs. Triggers can be set for all channels.

haper CR Trans	Level trigger	Compares to one voltage value
File Poper 24 - Start - Year Yoper 24	Window trigger	Compares to two voltage values
Tager	Voltage drop trigger	Detects voltage drops in commercial power lines
Detend trype - CR CR CR Trype advator	Period trigger	Monitors periods
Internal trigger	Glitch trigger	Detects anomalies in pulses
Simple trigger system diagram	Pattern trigger	Compares when the logic signal is ON/OFF

### Setting multiple triggers for a single channel

Set up to 4 triggers for a single channel. If, for instance, you set the glitch, level, window-in, and window-out triggers for the same input waveform, that waveform is monitored according to the set trigger conditions.

# Display Functions

## Numerical display function

This function is effective for checking the status before and during measurement.

Displays the measured value and the waveform at the same time.

# Sheet function (display group)

The instrument supports 3-, 6-, and 9-segment screen displays, allowing measurement results for 3-phase circuits to be displayed efficiently.

# Scroll function

You can use the scroll function to check the waveform as if viewing it on paper.

# Zoom function

The zoom function allows you to display all measurement waveforms on a single screen in the manner of an oscilloscope and to view desired locations in greater detail.

Compressed display of entire recording length

19 screen

types

Enlarged display of desired portion of waveform

# Waveform Search Function

# Easily search for waveforms in huge volumes of measurement data

### Memory HiCorder Concierge function

The Memory HiCorder Concierge function automatically calculates the characteristics of a reference waveform set by the customer and then searches all measured data while identifying waveforms that do not resemble the reference waveform as anomalous waveforms. This drastically reduces the amount of time required to search for anomalies by eliminating the need to scroll through measured waveforms and checking them visually.

Additionally, this function is ideal for situations where it is difficult to set the right triggers before measuring because the nature of potential anomalies cannot be predicted.

### reference waveform

Automatically search for waveforms with low similarity to the reference waveform

### Peak search

Search for the maximum value, minimum value, local maxima, or local minima in all of the measured data, and mark the search point in the waveform.

#### Trigger search

Set trigger conditions for all of the measured data after measurement to search for points where the conditions are fulfilled, even if no triggers were set before the measuring process.

#### Jump

Jump to an event mark you made while measuring, to the cursor position on the display, or to the measured data of a specified time.

# Waveform Generation Function

### Achieving the dual role of generation and recording with a single unit

The arbitrary waveform generation function and waveform measurement function are realized by one Memory HiCoder.

# Waveform output as expected ARBITRARY WAVEFORM GENERATOR UNIT U8793

Waveform observation while changing test conditions, such as changing the signal type, amplitude and frequency, and programming various waveforms to output them sequentially, can be made easier.

Output waveform example

# **Anomaly Simulation**

Reproduce and output the observed waveforms without modification. When resolving problems observed during research or development, you can reproduce such problems for efficient testing. For example, you could output actual waveforms recorded from a car without modification, and then use them for standalone testing. You can also generate isolated output of up to 15 V while varying the signal's amplitude and frequency without using a generator or amplifier, which is traditionally necessary. For example, you can create a power waveform such as power supply dips, instantaneous interruptions, and voltage fluctuations to use in an immunity test (to cause malfunctions in equipment caused by power supply harmonics).

Reproducibility testing

Measurement of abnormal waveform in actual vehicles

Max. 15 V output + amplifier

Reproduce and output anomalous waveforms

# Simultaneous measurement of a motor inverter's mechanical signals and power

The MR6000 can perform power measurement, which provides an effective means of evaluating the mechanical operation and electrical characteristics of equipment such as motor inverters. The instrument's power calculation function can display power values that change in small amounts of time on a cycle-by-cycle basis.

## Display of voltage, current, and power trends

When measuring voltage and current after configuring power calculation settings, the instrument automatically performs waveform calculations and displays power values. In addition, it can display calculation results after measurement if you configure the power calculation settings.

Example display of power calculation results

# Cycle-by-cycle calculations

The instrument performs calculation processing for each cycle, defined as the interval from one zero-cross point to the next zero-cross point, based on the waveform chosen as the reference channel.

Power calculations based on detected cycles

#### Supplying power from the instrument

When a Hioki high-precision current sensor is directly connected using the 3CH Current Unit U8977, the instrument automatically detects the sensor. (There is a limit on how many sensors can be connected.)

When measuring high voltages, the instrument can supply power to up to eight Differential Probe 9322 units using the Power Cord 9248 and the Probe Power Unit Z5021.

### Simple settings screen

A dedicated screen makes it easy to configure settings for power calculations, including wiring method and voltage and current channels.

No need to register detailed power equations

# Rotation angle measurement functionality

### Measurement of resolver rotation angle

Using the waveform calculation function, the instrument acquires three channels of data (resolver excitation signal,  $\cos \theta$ , and  $\sin \theta$ ) and generates a trend display for the motor's rotation angle.

#### Measurement of rotary encoder rotation angle

Using the waveform calculation function, the instrument acquires the A, B, and Z pulse signals from the rotary encoder and generates a trend display for the motor's rotation angle.

\*Only incremental method is available. Absolute method is not available.

Example of resolver signal measurement

Applications Time Measurement By performing numerical calculations on measured waveforms, you can perform analyses using numerical parameters. Not only analog channels and logic channels, but also results of the real-time waveform calculation function can be used in this calculations.

### Calculating switching times measured using logic channels (t1, t2, t3, T)

You can calculate time differences by applying numerical calculations to signals measured with logic channels.

Calculate the time difference T (s) at which waveforms A and B cross the specified level when either rising or falling.

Time difference T = Waveform B (time at which levels cross) - waveform A (time at which levels cross)

Reference channel (waveform A) calculation settings:	Level	Slope	Filter	
Calculation target channel (waveform B) calculation settings:	Level	Slope	Filter	

Trigger time	12:00.0
No. 1 time difference (t1)	1.50 s
No. 2 time difference (t2)	2.00 s
No. 3 time difference (t3)	1.00 s
No. 4 time difference (T)	4.50 s

Measurement waveforms and desired time differences

Example above: numerical calculation results

# Calculating the time that elapses until a reading falls from the maximum value to a defined level (e.g. 50 V) after a capacitor is charged during capacitor charge/discharge testing

You can calculate the defined value by calculating the time at which the maximum value occurs and the time at which the specified level occurs using numerical calculations and then performing your desired arithmetic operations.

#### Calculating the motor inrush starting current time (t1)

You can derive the desired time by calculating the burst width using numerical calculations.

Calculate the time at which the burst signal is output

Calculate the duration of an oscillating signal, for example the inrush current when a motor starts operating, as the burst width.

Calculation settings:	Filter	Statistics
	Burst e	nd filter
	Window (upper	limit, lower limit)

### Available calculation functions

Numerical calculations Perform up to 32 of 34 available calculations simultaneously during measurement.

Average value	Minimum value	Rise time	Specified level time	Pulse count	High level	Overshoot	Burst width
RMS value	Time-to-minimum value	Fall time	Specified time level	Arithmetic operation	Low level	Undershoot	Integration values
Peak-to-peak value	Period	Area value	Pulse width	Time difference	Median value	+ Width	X-Y waveform angle
Maximum value	Frequency	X-Y area value	Duty ratio	Phase difference	Amplitude	– Width	CAN statistics
Time-to-maximum value	Standard deviation						

Using a strain-gage-type converter or acceleration sensor, you can measure torque and vibration during motor operation. Discover unpredicted frequency components by using FFT calculations to perform a frequency analysis.

# Record torque and vibration during motor operation

# Simultaneous measurement and instantaneous analysis

The torque sensor (strain-gage-type converter) is connected to the Strain Unit U8969 to measure torque.

An acceleration sensor affixed to the chassis on which the motor is mounted, is connected to the Charge Unit U8979 to measure vibrations being transferred to the chassis.

The MR6000's FFT calculation function can be used to perform a frequency analysis of torque and vibration signals.

#### Available calculation functions

#### FFT calculation function

The MR6000 can analyze 8 phenomena simultaneously per measurement. Multiple FFT analyses of signals input from different channels let you investigate the frequency components that appeared for each channel at a single point in time. Similarly, conduct a variety of analyses for a single signal simultaneously.

#### FFT calculation 4-split screen

### FFT analysis directly from the measured data

Perform FFT analysis from measured data. Simply touch the screen to specify the starting point for analysis, while simultaneously viewing the calculation results.

Chronological order + FFT calculation screen

**Applications** Measurement of Dynamic Motor Characteristics

By using the X-Y display function with RPM on the X-axis, you can analyze fluctuations in torque, motor power, motor efficiency, and inverter output power for each RPM level

# Motor efficiency - Rotation Motor power — Torque Inverter output Start Increasing RPM Stop Stop Decreasing RPM 1Nm 1 2.5Nr CH2-1 3 Z11 2Nm Inverter output power Motor efficiency Torque Motor power RPM RPM

# Record fluctuations in various parameters from motor's start to stop

#### All-in-one measurement + pinpoint analysis

The signal from the torque sensor (Strain-gage-type converter) is measured with the Strain Unit U8969. Output from the motor's encoder (e.g. A-phase) is connected to the Frequency Unit 8970 to measure RPM.

The 3-phase inverter's voltage is measured using the 4ch Analog Unit U8978 and the Differential Probe 9322.

The 3-phase current is measured using the 3ch Current Unit U8977 and current sensors. Motor power, motor efficiency, and inverter output power are calculated after measurement using high-speed waveform processing, and the results are displayed using the instrument's X-Y display function.

#### Compositing over the specified X-Y interval

You can choose locations and generate an X-Y display of fluctuating waveforms from motor start to motor stop.

#### Available display functions

Products used

### X-Y display function

The MR6000 provides an extensive range of X-Y displays for captured waveforms, including an X-Y 1-screen display, X-Y 2-screen display, X-Y 4-screen display, and time series display + X-Y 2-screen display. The ability to use the X-Y display for waveform processing results as well as input signals from measurement units means that you can perform a broad range of analyses.

З

### XY waveform angle and area values

You can use the numerical calculation function on the X-Y display. Calculate XY waveform angle and area values using the numerical calculation function while viewing the X-Y display.

n: Number of curves

З

- \*1 The 4ch Analog Unit U8975 can be used when measuring voltages of 100 V AC or less.
- \*2 Strain-gage-type converter (for more information about the sensor, please contact the sensor manufacturer.)

# Software

Load data measured with the MR6000/ MR6000-01 onto a PC to display waveforms and perform calculations

Intuitive operation	Waveform processing	FFT calculations			
Utilize functionality similar to that provided by the MR6000 on a					
PC, including numeric	cal calculations, wave	form processing,			

and FFT calculations. (Some restrictions apply.)				
Supported models MR6000, MR6000-01				
Supported operating system	Windows 10 (64-bit) For other system requirements, please see the user manual.			
Availability	Free download from the Hioki website			

# Waveform display zoom

Zoom each axis in or out by spinning the mouse's scroll wheel while placing the cursor over either the left or bottom of the screen.

# Functionality similar to the MR6000

me as instrument functionality and usability

You can display data, change settings, perform calculations, and save data in the MR6000 Viewer.

# Ideal for creating reports

Copy a screenshot of the waveform screen to the clipboard.

# Register waveform formulas and perform calculations

Formula: RSLV(CH(1,1),CH(1,2),CH(1,3),1)

# Wave Processor 9335 (sold separately)

The 9335 provides waveform display, processing, and printing functionality.

# FFT calculations

System requirements	Windows 10/8/7 (32-bit/64-bit)
Functionality	<ul> <li>Display functionality: Waveform display, X-Y display, cursor function, etc.</li> <li>File loading: Loadable data formats (.mem, .rec, .rms, .pow); The maximum loadable file is the maximum size of the Memory HiCorder being used. (The loadable file size is also dependent on the maximum size that can be saved by the PC being used.)</li> <li>Data conversion: Conversion to CSV format, batch conversion of multiple files, etc.</li> </ul>
Printing	<ul> <li>Printing functionality: Save print image file (in .emf format)</li> <li>1, 2, 4, 8, or 16 graphs; 2, 4, 8, or 16 rows, 1, 2, or 4 X-Y graphs; preview; hard coopy</li> </ul>

### Comparison with other Hioki software

Software	MR6000 Viewer	Wave Processor 9335
Waveform screen	Yes	Yes
Trace cursor	Yes	Yes
Saving	.csv, .txt, .set, .bmp, .png, .jpeg, binary, .flt	.csv, .txt
Settings	Yes*1	No
Printing	No	Screen image, detailed printing
Numerical calculations	Yes	Yes
Waveform processing	Yes	No
FFT calculations	Yes	No
X-Y display	Yes	Yes
Supported operating systems	Windows 10 (64-bit)	Windows 10, Windows 8, Windows 7 (32-bit, 64-bit)
Price	Free	Varies with region

\*1 After loading waveform data, you can edit settings and create settings files.

# Bringing Field Measuring Results to Your PC

Simultaneous Observation of Data from Multiple Instruments

Data collection	Real-time performance	Batch display and saving
GENNECT One lets y	ou display and save	data in real time on a
PC during measurem	ent. It also serves as	a useful tool in
measurement applica	tions that include ot	her instruments.
Supported models	MR6000, MR60	000-01, etc.
Supported operating s		bit / 64-bit), Windows 8.1 2-bit / 64-bit), Windows 11
Availability	Free download	from the Hioki website

### Simultaneous, real-time observation

GENNECT One lets you display data from multiple instruments together and in real time in list or graph form.

#### LAN remote control function

Change instrument settings and control operation, for example to start or stop measurement.

Example remote control screen

### Commercially available software

FAMOS

 More than 400 calculation processing variables
 Easy report creation functionality Download a free MR6000 import filter free of charge from Hioki's website.

#### FlexPro

- High-speed search and processing of large volumes of data
- Share analysis templates inside your company

#### NI DIAdem

 Functionality ranging from searching and loading of data to analyzing and creating of reports
 Dialog-based interface

# OS-2000

- Freely edit large data that cannot be handled by Excel
- Simultaneously display the waveforms which have different frequencies

### Control scripts and drivers

On Hioki's website, search for "MR6000" > "Downloads" > "Drivers, Firmware & Software" to find downloadable drivers.

#### MATLAB

Available scripts allow you to directly load waveform data measured and saved using the MR6000's memory function, while control scripts let you start and stop measurement, acquire measurement data, and configure measurement settings.

#### LabVIEW

An available driver lets you control the MR6000 and acquire measurement data. The driver was created using LabVIEW 2009 sp1, and it has been confirmed to operate with LabVIEW 2017.

# **Multifunctional Interface**

Open or close the top panel of the main unit Z4006 USB DRIVE installable

## Only 6 keys in total New recorder design

Use the touch screen to configure all the basic settings.

**STOP button** For importing the set recording length and stopping the measuring process

**Power button** For turning the power on or off

USB 2.0 connector × 2 For connecting a USB memory stick, USB mouse, or USB keyboard

USB 3.0 connector × 2 For connecting a USB memory stick, USB mouse, or USB keyboard

Versatile

For connecting to a network via LAN cable

DVI terminal For outputting the screen display External sampling terminal For inputting various external sampling signals

19

22

**External control terminal** For inputting various external signals to control the device

Dedicated power supply terminal for current sensors For supplying power to current sensors (option)

Various units Install input units appropriate for the measurement target

Air inlet For reducing the internal temperature

Media box For USB 3.0 connectors (USB memory sticks only)

### Operability and visibility suited for a variety of work environments

#### Ergonomical operating angle

HIOKI

Our search for a touch screen with the best operability and visibility angle led us to develop retractable feet that maximize those two important attributes. Tilting the MR6000 with the feet reduces the strain on your wrists when you use the device on a desk, and keeps your line of sight at a natural level.

#### Easy handling

The rubber handle boasts excellent grip and makes it easy to carry the device with either one or both hands. The grips on either side of the device can also be used to lift it with both hands.

2.0

MR6000

MEMORY

#### Space-saving size

We have achieved a design that is compact while still delivering blazing fast processing speeds by using thermal liquid analysis to optimally position the air inlets, heating components, and cooling fans.

#### Sleek design

The beveled corners of the Memory HiCorder's body gives the device a compact and sleek look. This simple and refined appearance is sure to be a strong addition to the creative environment of any R&D workspace.

Output terminal for	r probe correction	signals
Output signals Functions		Hz ±1% square waves 00:1 PROBE 9666 correction
*Option to be specified u Number of terminals	upon order placement (v	current sensor with PROBE POWER UNIT Z5021 installed)
Output voltage	± 12 V ± 0.5 V DC	
Trigger *Not available	when the real-time sav	e function is used
Trigger type	Digital comparison ty	
Trigger conditions		n for trigger sources and interval trigger ne waveform processing
Trigger source	*Up to 4 analog tri *Up to 4 logic trigg *Up to 2 analog trigg When START&STOI Analog: Up to 16 cf Logic: Up to 16 pr Real-time waveform *Up to 2 trigger ty *Up to 2 logic trigg External trigger	OP is selected: Up to 32 channels gers can be set for each nanlog channel. ers can be set for each nanlog channel. ers can be set for each real-time waveform processing channel. P is selected: Up to 16 channels / group nannels / group (Up to 2 channels per unit can be selected.) obes / group (Up to 2 channels per unit can be selected.) obes / group (Up to 2 channels / group per server and the selected.) opes from each group can be set for each nalog channel. ers from each group can be set for each logic probe. is activated if all trigger sources are turned off.
	Level trigger	Triggering occurs when the set level rises (falls).
	Voltage drop trigger	Triggering occurs when peak voltage drops below the set level. (For a 50 Hz / 60 Hz commercial power supply only) *1, *2, *3
	Window trigger	Sets the upper and lower limit for trigger level. Triggering occurs when leaving (OUT) or entering (IN) the area. *1
Analog triggers	Period trigger	Sets the period reference value and cycle range. Triggering occurs when the rising (falling) reference value period is measured and determined to be outside or within the cycle range. ^1, ^2, ^3
	Glitch trigger	Sets the reference value and pulse width (glitch width). Triggering occurs if the value is below the set pulse width from rising or falling of the reference value. *1, *Not available with MR8990, *3
	Specifying events	Specifying events (1 to 4000) Counts the number of times conditions were fulfilled for each trigger source. Triggering occurs when the set number of times is reached. *Not available when the trigger conditions are set to AND
		*1: Disabled when sampling rate is set to 200 MS/s. *2: Not available with MR8990 or 8970 *3: Not available with envelope setting
Logic trigger Forcible trigger	Pattern trigger using	1, 0, or x iggering can be prioritized over all trigger sources.)
Forcible trigger		gered when receiving a specific data frame, error frame,
CAN trigger	or remote frame. When a data frame is between bits in spec	s chosen, the instrument can be triggered by comparing ific byte positions.
Interval trigger	The trigger condition	specified measuring intervals (hours, minutes, or seconds) is are fulfilled when the measuring process starts. er conditions are met at the set measuring intervals.
Trigger filter	Normal Envelope	OFF, 10, 20, 50, 100, 150, 200, 250, 500, 1000, 2000, 5000, 10,000 samples OFF, 1 ms, 10 ms
Trigger level setting resolution		
Pre-trigger	0% to 100% (any val time for pre-trigger	ue set in 1% steps available), displaying the recording
Post-trigger		ng the recording time for post-trigger
Trigger priority Trigger mark	ON / OFF Displays trigger mark	ks for the positions where triggers are set.
Trigger timing	START, STOP, STAR	
Waveform monitoring	Displays the wavefor be turned off.)	m monitor in the trigger standby state. (The display can
display Waveform screen	be turned on.)	
	Time-domain waveform representation	1, 2, 3, 4, 6, 8, 9, 16 screens (Up to 64 channels can be displayed on each sheet.) (Every channel can be set to be displayed on multiple sheets.)
Display format		1, 2, 4 screens, combination of time-series waveforms and XY (2 screens)
	XY composite waveform display	(Unsettable when envelope is enabled) (Up to eight XY composite waveforms can be set) (Multiple sheets can display the same composite waveforms)
		(Unsettable when envelope is enabled) (Up to eight XY composite waveforms can be set) (Multiple sheets can display the same composite waveforms) 1.2,4 screens, combination of time-series waveforms

 HIGH SPEED ANALOG UNIT

 (Accuracy at 23 ± 5° C/73 ± 9°E 201)

U8976	(Accuracy at 23 ±5°C/73 ±9°F, 20 to 80% HH after 30 minutes of warm-up time and zero adjustment; Accuracy guaranteed for 1 year)
Measurement functions	No. of channels: 2, for voltage measurement
Input terminals	Isolated BNC connector (input impedance 1 M $\Omega$ , input capacitance 22 pF) Max. rated voltage to ground:1000 V AC, DC (with input isolated from the unit, the maximum voltage that can be applied between input channel and chassis and between input channels without damage)
Measurement range	100, 200, 400 mV f.s. 1, 2, 4, 10, 20, 40, 100, 200, 400 V f.s., 12 ranges AC voltage for possible measurement/display: 280 V rms Low-pass filter: 5/500/5 k/1 MHz
Measurement resolution	1/1600 of measurement range (using 12-bit A/D conversion)
Maximum sampling rate	200 MS/s (simultaneous sampling in 2 channels)
Measurement accuracy	±0.5% f.s. (with filter 5 Hz, zero position accuracy included)
Frequency characteristics	DC to 30 MHz -3 dB (with AC coupling: 7 Hz to 30 MHz -3 dB)
Input coupling	AC/DC/GND
Maximum input voltage	400 V DC (with direct input), 1000 V DC (with 9665)

Ple your current sensors' specifications Measurement accuracy (with 5 Hz filter ON) ±0.3% f.s. Frequency characteristics: DC to 2 MHz ±3 dB Note: Add the accuracy and attributes of the current sensor being used. Measurement resolution 1/32,000 of measurement range (using 16-bit A/D conversion) Maximum sampling rate 5 MS/s (simultaneous sampling in 3 channels) Other functions Input coupling: DC/GND, Low-pass filter: 5/500/5 k/200 kHz

(Accuracy at 23 ±5°C/73 ±9°F, 20 to 80% and zero adjustment; Accuracy guarante

Dedicated connector terminal (ME15W) (input impedance 1 MQ

Measurement functions No. of channels: 3, Current measurement with optional current s

Dimensions/mass: approx. 106 mm (4.17 in.) W x 19.8 mm (0.78 in.) H x 196.5 mm (7.74 in.) D, approx. 230 g (8.1 oz.), Accessories: None

CHARGE UNIT U897	(Accuracy at 23 ±5°C/73 ±9°F, 20 to 80% RH after 30 minutes of warm- up time and zero adjustment; Accuracy guaranteed for 1 year)
Measurement functions	No. of channels: 2, for acceleration measurement
Input terminals	Voltage input / pre-amp embedded input: Metal BNC connector (Under voltage input: input impedance 1 MΩ, input capacitance 200 pF or less) Charge input: Miniature connector (#10-32UNF) Max. rated voltage to ground: 30 V AC or 60 V DC (with input isolated from the main unit, the maximum voltage that can be applied between input channel and chassis, and between input channels without damage) *Voltage input terminal GND and charge input terminal GND for the same channel are shared.
Suitable transducer	Charge output type acceleration detector Pre-amp embedded acceleration detector (IEPE type)
Measurement range Charge input (Miniature connector) Pre-amp embedded input (BNC connector)	1 (m/s <sup>2</sup> ) to 200 k (m/s <sup>2</sup> ) f.s., 12 ranges x 6 types Charge input sensitivity: 0.1 to 10 pC /(m/s <sup>2</sup> ) Pre-amp embedded sensor input sensitivity: 0.1 to 10 mV /(m/s <sup>2</sup> ) Amplitude accuracy: ±2% f.s. Frequency characteristics: 1(1.5) to 50 kHz -3 dB (charge input) Low-pass filter: 500/5 kHz Pre-amp supply power: 3.5 mA ±20%. 22 V ±5% Maximum input charge: ±500 pC (6 ranges on high sensitivity side), 50.000 pC (6 ranges on low sensitivity side)
Measurement range Voltage input (BNC connector)	10 mV to 40 V f.s., 12 ranges, DC amplitude accuracy: ±0.5% f.s. Frequency characteristics: DC to 50 kHz -3 dB (with DC coupling), 1 Hz to 50 kHz -3 dB (with AC coupling) Low-pass filter: 5/500/5 kHz, input coupling: AC/DC/GND Maximum input voltage: 40 V DC
Measurement resolution	1/25,000 of measurement range (using 16-bit A/D conversion)
Maximum sampling rate	200 kS/s
Anti-aliasing filter	Integrated filter for suppressing aliasing distortion caused by FFT processing (automatic cutoff frequency setting/OFF)
TEDS	IEEE 1451.4 class 1 support (Support for sensor information reading and automatic sensitivity setting)

Dimensions/mass: approx. 106 mm (4.17 in.) W x 19.8 mm (0.78 in.) H x 196.5 mm (7.74 in.) D, approx. 250 g (8.8 oz.), Accessories: None

FREQ UNIT 8970	(Accuracy at 23 $\pm 5^{\circ}\text{C}/73~\pm 9^{\circ}\text{F},$ 20 to 80 % RH after 30 minutes of warm-up time; Accuracy guaranteed for 1 year)
Measurement functions	No. of channels: 2, for voltage input based frequency measurement, rotation, power frequency, integration, pulse duty ratio, pulse width
Input terminals	Isolated BNC connector (input impedance 1 M $\Omega$ , input capacitance 30 pF), Max. rated voltage to ground: 300 V AC, DC (with input isolated from the unit, the maximum voltage that can be applied between input channel and chassis and between input channels without damage)
Frequency mode	Measurement range: Between DC to 100 kHz (minimum pulse width 2 µs), 20 Hz to 100 kHz f.s., 8 ranges Accuracy: ±0.1% f.s. (exclude 100 kHz range), ±0.7% f.s. (100 kHz range)
Rotation mode	Measurement range: Between 0 to 2 million rotations/minute (minimum pulse width 2 µs), 2 kr/min to 2 Mr/min f.s, 7 ranges Accuracy: ±0.1% f.s. (exclude 2 Mr/min range), ±0.7% f.s. (2 Mr/min range)
Power frequency mode	Measurement range: 50 Hz (40 to 60 Hz), 60 Hz (50 to 70 Hz), 400 Hz (390 to 410 Hz), 3 ranges Accuracy: ±0.03 Hz (50, 60 Hz), ±0.1 Hz (400 Hz range)
Integration mode	Measurement range: 40 k-counts f.s. to 20 M-counts f.s. 6 ranges Accuracy: ±0.0025% f.s.
Duty ratio mode	Measurement range: Between 10 Hz to 100 kHz (minimum pulse width 2 µs), 100% f.s. Accuracy: ±1% (10 to 10 kHz), ±4% (10 k to 100 kHz)
Pulse width mode	Measurement range: Between 2 µs to 2 s, 10 ms to 2 s f.s. Accuracy: ±0.1% f.s.
Measurement resolution	0.0025% f.s. (Integration mode), 0.01% f.s. (exclude integration, power frequency mode),0.01 Hz (power frequency mode)
Input voltage range and threshold level	±10 V to ±400 V, 6 ranges, selectable threshold level at each range
Other functions	Slope, Level, Hold, Smoothing, Low-pass filter, Switchable DC/AC input coupling, Frequency dividing, Integration over-range keep/return

Q For details, see product information on Hioki's website.

# **R&D** testing and analysis Meeting the demanding requirements of a broad range of industries

Increased efficiency of inverters and improved performance of energy-saving technologies have been achieved in the power electronics, renewable energy, and automotive industries. We have drastically improved the technology used in our Memory HiCorders, developing the MR6000 Memory HiCorder to meet the advanced demands

# Unit selection guide (18 types)

Unit interchangeability The following units are compatible with the MR6000. Some units in the list are also compatible with the MEMORY HiCORDER MR8827, MR8847A, MR8740, MR8741, and MR8740-50. Please check the brochure of each product.

Measured signal	Model	Description	No. of channels	Fastest sampling	Bandwidth	A/D resolution	DC accuracy	Max. input voltage	Sensitivity (#1)	Max. sensitivity range	Isolation	Supplement
Voltage (high speed)	U8976	High-Speed Analog Unit	2 ch	200 MS/s	DC to 30 MHz	12 bits	±0.5% f.s.	400 V DC 1000 V DC (#2)	0.0625 mV	100 mV f.s.	Yes	n/a
Voltage	8966	Analog Unit	2 ch	20 MS/s	DC to 5 MHz	12 bits	±0.5% f.s.	400 V DC	0.05 mV	100 mV f.s.	Yes	n/a
Voltage (4ch)	U8975	4ch Analog Unit	4 ch	5 MS/s	DC to 2 MHz	16 bits	±0.1% f.s.	200 V DC	0.125 mV	4 V f.s.	Yes	n/a
Voltage (4ch, high resolution)	U8978	4ch Analog Unit	4 ch	5 MS/s	DC to 2 MHz	16 bits	±0.3% f.s.	40 V DC	3.125 uV	100 mV f.s.	Yes	n/a
Voltage (high resolution)	8968	High Resolution Unit	2 ch	1 MS/s	DC to 100 kHz	16 bits	±0.3% f.s.	400 V DC	3.125 uV	100 mV f.s.	Yes	with AAF
Voltage (DC, RMS)	8972	DC/RMS Unit	2 ch	1 MS/s	DC to 400 kHz	12 bits	±0.5% f.s.	400 V DC	0.05 mV	100 mV f.s.	Yes	with RMS
Voltage (high voltage)	U8974	High Voltage Unit	2 ch	1 MS/s	DC to 100 kHz	16 bits	±0.25% f.s.	1000 V DC 700 V AC	0.125 mV	4 V f.s.	Yes	n/a
Voltage (high resolution)	MR8990	Digital Voltmeter Unit	2 ch	2 ms	n/a	24 bits	±0.01% rdg. ±0.0025% f.s.	500 V DC	0.1 uV	100 mV f.s.	Yes	n/a
Current	U8977	3ch Current Unit	3ch	5 MS/s	DC to 2 MHz	16 bits	±0.3% f.s.	Current sensor only		on current nsor	n/a	Max. 3 Units
Current	8971	Current Unit	2 ch	1 MS/s	DC to 100 kHz	12 bits	±0.65% f.s.	Current sensor only		on current nsor	n/a	with RMS Max. 4 Units
Temperature	8967	Temperature Unit	2 ch	1.2 ms	DC	16 bits	Detailed reference	Thermocouples only	0.01°C	200°C (392°F)f.s.	Yes	n/a
Strain	U8969	Strain Unit	2 ch	200 kS/s	DC to 20 kHz	16 bits	±0.5% f.s. ±4 με	Strain only	0.016 με	400 µɛf.s.	Yes	Discontinued product 8969 can also be use
Frequency	8970	Frequency Unit	2 ch	200 kS/s	DC to 100 kHz (#3)	16 bits	n/a	400 V DC	0.002 Hz	Depends on mode	Yes	n/a
Acceleration	U8979	Charge Unit	2 ch	200 kS/s	DC to 50 kHz (DC) 1 Hz to 50 kHz (AC)	16 bits	±0.5% f.s. (Voltage) ±2.0% f.s. (Acceleration)	40 V DC		nds on tion sensor	Yes	Supports TEDS
Logic	8973	Logic Unit	4 probes (16 ch)	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	Requires 9320-01, 9327 or MR9321-0

Output signal	Model	Description	No. of channels	Output function	Output voltage range	Supplement
Waveform generation	U8793	Arbitrary Waveform Generator Unit	2 ch	FG: Sine, Square, Pulse, Triangle, Ramp, DC Arbitrary waveform generation: Measurement waveform with Memory HiCorder, Waveform editted with the SP8000	-10 to 15 V	n/a
Waveform generation	MR8790	Waveform Generator Unit	4 ch	DC, Sine wave (output frequency range: 1 Hz to 20 kHz)	-10 to 10 V	n/a
Pulse generation	MR8791	Pulse Generator Unit	8 ch	Pulse output: frequency is 0.1 Hz to 20 kHz Logic output: output voltage level is 0 V to 5 V, Open collector output	Output terminal Connector: D-sub, half-pitch, 50-pin	n/a
